1	Introduction	1
----------	---------------------------	----------

Part I From Galileo to Minkowski

2	On the Impossibility of Detecting Uniform Motion ..	13
2.1	Aristotle's View on Motion	14
2.2	Copernicus and Ptolemy's Arguments Against the Earth's Motion	16
2.3	Galileo's Disproof of Aristotle's View on Motion	17
2.4	Galileo's Principle of Relativity	25
3	Exploring the Internal Logic of Galileo's Principle of Relativity	29
3.1	On the Physical Meaning of Galileo's Principle of Relativity	30
3.2	On the Two Postulates of Special Relativity	48
3.3	A Lesson from a Delayed Discovery	51
3.4	Summary	53
4	Relativity in Euclidean Space and in Spacetime	55
4.1	Spacetime	56
4.2	Derivation of the Lorentz Transformations	70
4.3	Four-Dimensional Distance and Three Kinds of Length	78
4.4	Y 'Dilation' in Euclidean Space and Time Dilation in Spacetime	84
4.5	Length Contraction in Euclidean Space and in Spacetime	91
4.6	The Twin Paradox in Euclidean Space and in Spacetime	98
4.7	Addition of Velocities	105
4.8	The Metric of Spacetime	106

4.9	On Proper and Coordinate Time	107
4.10	Four-Velocity, Four-Momentum, and Relativistic Mass	111
4.11	Summary	116

**Part II On the Nature of Spacetime:
Conceptual and Philosophical Issues**

5	Relativity and the Dimensionality of the World: Spacetime Is Real	121
5.1	Has Special Relativity Posed the Greatest Intellectual Challenge to Humankind? ...	122
5.2	Relativity and Dimensionality of the World	123
5.3	Length Contraction	134
5.4	Time Dilation	139
5.5	Relativization of Existence and the Twin Paradox	142
5.6	Why Is the Issue of the Nature of Spacetime So Important?	146
	5.6.1 Conventionality of Simultaneity	146
	5.6.2 Temporal Becoming	147
	5.6.3 Flow of Time and Consciousness	148
	5.6.4 Free Will	152
5.7	Summary	153
6	Quantum Mechanics and the Nature of Spacetime ..	155
6.1	Quantum Mechanical Arguments Against the Reality of Spacetime	157
6.2	Is Quantum Mechanical Probability Objective?	158
6.3	The Nature of the Quantum Object and the Nature of Spacetime	160
6.4	Summary	168
7	The Nature of Spacetime and Validity of Scientific Theories	171
7.1	Reliability of Knowledge: Induction as Hidden Deduction	172
7.2	Correspondence Principle and Growth of Scientific Knowledge	177
7.3	Can an Accepted Scientific Theory Be Refuted?	180
7.4	Is a Final Scientific Theory Possible?	182
7.5	Summary	182

**Part III Spacetime, Non-Inertial Reference Frames,
and Inertia**

8	Propagation of Light in Non-Inertial Reference Frames	191
8.1	Acceleration Is Absolute in Special and General Relativity	191
8.2	The Need for Two Average Velocities of Light in Non-Inertial Reference Frames	193
8.3	Average Coordinate Velocity of Light	197
8.4	Average Proper Velocity of Light	201
8.5	Shapiro Time Delay	211
8.6	On the Gravitational Redshift	213
8.7	The Sagnac Effect	219
8.8	Summary	222
9	Calculating the Electric Field of a Charge in a Non-Inertial Reference Frame	225
9.1	Calculating the Potential of a Charge in a Non-Inertial Reference Frame	225
9.2	Common Physical Origin of the Liénard–Wiechert Potentials and the Potentials of a Charge in a Non-Inertial Reference Frame	229
9.3	Calculating the Electric Field of a Charge in a Non-Inertial Reference Frame	237
9.4	Summary	241
10	Inertia as a Manifestation of the Reality of Spacetime	243
10.1	Are Inertial Forces Real?	244
10.2	Inertial Forces Originate from a Four-Dimensional Stress Arising in the Deformed Worldtubes of Non-Inertial Bodies	246
10.3	Electromagnetic Mass and Inertia of the Classical Electron	252
10.4	The Standard Model and Inertia	262
10.5	Summary	271
A	Classical Electromagnetic Mass Theory and the Arguments Against It	273

XII Contents

B Calculation of the Self-Force	277
